PROFESSIONAL SUMMARY

Entry-level data analyst with a B.S. in Biomedical Engineering (Minor in Computer Science) and a portfolio of end-to-end analytics projects spanning SQL relational databases, Python machine learning pipelines, and interactive Power BI dashboards. Formal biostatistics training, strong statistical foundation, and proven ability to communicate data-driven insights to both technical and non-technical audiences. Fast learner across domains; trilingual (English, Spanish, French).

CORE COMPETENCIES

Data Analysis & Analytics • SQL & Relational Databases • Python (pandas, NumPy, scikit-learn) • Statistical Analysis & Hypothesis Testing • Machine Learning • Power BI & Data Visualization • ETL & Data Pipelines • Exploratory Data Analysis (EDA) • Feature Engineering • KPI Reporting & Dashboards • Data Quality & Data Integrity • R • Ad Hoc Analysis • Data-Driven Recommendations • Cross-Functional Collaboration

TECHNICAL SKILLS

Programming: Python (pandas, NumPy, scikit-learn), SQL, R, C++
Statistics & Analytics: Statistical analysis, hypothesis testing, regression analysis, EDA, machine learning, feature engineering, time-series analysis, KPI reporting, ad hoc analysis, trend analysis
Databases & ETL: Relational database design (SQL/SQLite), star schema, data modeling, ETL, data quality assessment, data governance, data integrity
Reporting & Visualization: Power BI, Excel (pivot tables, advanced formulas), data visualization, KPI dashboards, stakeholder reporting
Tools & Certs: Git/GitHub, AWS & Azure (basics), MATLAB, SolidWorks | CSWA, CSWA-S, First Aid/CPR/AED
Languages: Fluent in English, Spanish, and French

EDUCATION

B.S. in Biomedical Engineering, Minor in Computer Science — University of Arkansas May 2026
Fayetteville, AR | GPA: 3.4
Relevant Coursework: Biostatistics, Data Structures, Linear Algebra, Signals and Systems, Modeling, Productivity Improvement (Lean)

TECHNICAL PROJECTS

Healthcare Readmission Analytics — SQL, Python (pandas), Power BI 2026
• Designed and built a normalized SQL star-schema relational database (SQLite) from 25,000 patient records, with a fact table, conformed dimensions, and a bridge table resolving many-to-many relationships.
• Built an end-to-end Python/SQL data pipeline -- data ingestion, EDA, data-quality assessment, and ETL into a schema with enforced primary and foreign keys; identified prior inpatient utilization as the top readmission driver (rates 40% to 81%).
• Developed an interactive Power BI dashboard with KPI cards to communicate data-driven insights and recommendations to a non-technical audience.

Energy Demand Forecasting — Python (pandas, scikit-learn), XGBoost Jan 2026 - Present
• Built an end-to-end machine learning pipeline on 2M+ time-series data points; engineered lag and time-based features improving model performance (R2: 0.30 to 0.61); compared and validated Linear Regression, Random Forest, and XGBoost models.

EEG Seizure Detection — Python (scikit-learn, XGBoost) 2026
• Engineered 12 statistical features from raw EEG physiological time-series; trained classification models (Random Forest, XGBoost) achieving ~98% accuracy; evaluated with precision, recall, F1, and confusion matrices; documented reproducible methods in version control.

WORK EXPERIENCE

Process Optimization & Analytics Intern — eSoft S.R.L. May-Aug 2024, May-Aug 2025
La Paz, Bolivia
• Analyzed client workflows and delivered data-driven process improvements, reducing processing time by 20-30%; built Power BI and Excel dashboards to track and report KPIs to cross-functional stakeholders.
• Documented business requirements and designed rule-based automation logic; coordinated with vendors and cross-functional teams to implement and validate process changes.

Lifeguard — University of Arkansas May 2022 - Present
Fayetteville, AR
• Monitor safety equipment and enforce regulatory compliance for a facility serving 100+ daily users; maintain precise incident documentation.

LEADERSHIP

Go Baby Go! — University of Arkansas Fall 2025 - May 2026
• Led a multidisciplinary team to design and adapt a ride-on vehicle for a child with mobility impairments, collaborating with clinicians and the family to translate clinical needs into a functional, tested solution.
